SUMMARY

Software Engineer specialising in backend infrastructure and application security. Beyond technical execution, I bridge the gap between engineering and business by translating product requirements into secure, scalable architecture. I own end-to-end feature delivery from initial scoping through deployment and have a proven track record of auditing live systems, communicating risk to stakeholders, and closing high-severity vulnerabilities in production. ISC2 CC certified; proficient in Node.js, Python, IT support and cloud platforms.

EXPERIENCE

Streple (Fintech) – Security Analyst – Remote

Oct 2025 – Mar 2026

- Reviewed and hardened REST API endpoints, audited access-control logic, HTTPS enforcement, HSTS configuration, and encryption standards; authored a formal API Encryption Standards Review Report shared with engineering leadership.
- Identified a high-severity Broken Access Control flaw in a referral-reward API and wrote a remediation plan covering RBAC enforcement, rate limiting, and audit logging, closing the vulnerability in the next sprint.
- Ran a security assessment of the platform's token-reward and gamification backend, documenting replay-abuse and point-manipulation vectors; proposed and scoped a CAPTCHA integration to mitigate bot logins and credential stuffing.
- Produced weekly security review reports for engineering leadership, communicating risk clearly across technical and non-technical stakeholders.

Jaiz Bank Plc – IT Intern – Onsite

Jul 2025 – Sep 2025

- Diagnosed and resolved hardware and network issues across multiple departments, reducing downtime by 5%.
- Supported OS updates and system maintenance, contributing to security compliance initiatives.
- Logged software bugs and assisted with app testing, improving end-user stability and performance.

Early Code – Mobile App Intern – Onsite

Mar 2025 – May 2025

- Built secure authentication and onboarding modules for a university community mobile app using React Native (Expo).
- Owned the home feed logic end-to-end; collaborated in cross-functional planning with product and design.

NetAlert Inc. – Front-end Intern – Hybrid

Aug 2024 – Dec 2024

- Developed reusable React components and Redux modules for a fintech dashboard.
- Partnered with UX designers in Figma to refine UI components; contributed to the waitlist landing page.

ALX / HeadStarter – Software Engineering Fellow – Remote

Apr 2024 – Aug 2024

- Engineered and shipped full-stack features in React and Next.js within an Agile environment, participating in sprint planning and cross-functional team syncs to ensure alignment with project requirements.
- Conducted technical code reviews, communicating architectural feedback clearly to peers to maintain codebase standards and minimize deployment risks.

SKILLS

Languages

JavaScript (ES6+), TypeScript, Python (FastAPI), Java, Node.js

Backend	RESTful APIs, Node.js, FastAPI, cloud integration, RAG pipelines
Frontend	React, Next.js, React Native (Expo), Tailwind CSS, Redux Toolkit, Zustand, WebSockets
Databases	SQL, Redis, MongoDB, PostgreSQL, cloud storage
Testing/QA	Jest, React Testing Library, achieved 70%+ test coverage on TrybeMarket
DevOps/Tools	GCP, AWS, Docker, Git, GitHub, GitHub Actions (CI/CD), Vercel, Expo EAS, Agile/Scrum
Security	OWASP Top 10, Burp Suite, OWASP ZAP, API security, RBAC, SSL/TLS, ISC2 CC certified Cross-Functional Collaboration, Technical Communication, Strategic Alignment, Risk Articulation, Agile Adaptability.

EDUCATION & CERTIFICATION

B.Sc. Software Engineering · Lead City University, Ibadan, Nigeria, *Expected July 2026*

ISC2 Certified in Cybersecurity (CC) *Active credential*

PROJECTS

TrybeMarket · **React Native** · **Expo** · **Firebase** · **Node.js** · **Jest**

- Contributed to a 3-person team building a mobile-first hyper-local e-commerce platform for Nigerian students. Delivered secure auth, marketplace modules, and payment flow integration; achieved 70%+ test coverage and a successful beta launch.

AI-Powered Flashcard SaaS · **Next.js** · **React** · **Groq AI** · **Firebase** · **Vercel**

- Designed scalable architecture and integrated a Groq AI backend with a RAG pipeline to power personalised learning. Deployed to production on Vercel with Firebase Firestore as the data layer.

API Security Assessment · **Streple Platform** · **Burp Suite** · **OWASP ZAP** · **RBAC** · **REST**

- Conducted end-to-end security review of a live fintech API: identified access-control vulnerabilities, authored remediation runbooks, and validated fixes demonstrating a developer's understanding of how backend systems fail under attack.
