ABDULRASHEED OLABANJI ABDULHAQ

Software Engineer | Backend & Full-Stack Development | Secure Systems & Process Optimization

+234 708 318 6357 · abdulhaqabdulrasheed@gmail.com
Remote-Ready · LinkedIn | Portfolio | GitHub

PROFESSIONAL SUMMARY

First-class Software Engineering graduate and ISC2 Certified in Cybersecurity professional with experience designing, building, and securing REST APIs, full-stack applications, and backend systems. Proven track record auditing production APIs, resolving high-severity access control vulnerabilities, and implementing RBAC standards. Skilled in Node.js, FastAPI, React, and cloud architectures, bringing strong technical judgment and security awareness to engineering teams.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Python, Java
- **Backend & APIs:** Node.js, FastAPI, RESTful APIs, API Integration, Authentication & Authorisation, AI/RAG Pipelines
- **Databases:** PostgreSQL, MongoDB, Redis, Supabase, Firebase
- **Frontend & Mobile:** React, Next.js, React Native, Expo, Redux Toolkit, Zustand, Tailwind CSS, WebSockets
- **Cloud & DevOps:** AWS, GCP, Docker, Git, GitHub Actions, Vercel, Expo EAS
- **Security & Testing:** OWASP Top 10, RBAC, API Security, SSL/TLS, Input Validation, Jest, React Testing Library
- **Engineering Practices:** Agile/Scrum, Code Review, Technical Documentation, System Design, Debugging

PROFESSIONAL EXPERIENCE

Streple — *Application Security Engineer Intern* **Remote | Oct 2025 – Mar 2026**

- Audited production REST API endpoints across access-control logic, input validation, and token handling, identifying and remediating a high-severity Broken Access Control vulnerability to prevent privilege escalation within the referral-reward system.
- Designed and implemented encryption and RBAC standards across API and web endpoints, enforcing HTTPS and HSTS configuration to strengthen overall application security posture.
- Modelled five realistic attack vectors—including point manipulation, replay abuse, and credential stuffing—against gamification logic to proactively identify and patch systemic flaws.
- Authored comprehensive API security and remediation documentation, establishing standardised secure coding practices and compliance guidelines across the engineering team.

Jaiz Bank Plc — *IT Intern* **Onsite | Jul 2025 – Oct 2025**

- Diagnosed and resolved hardware, software, and network infrastructure issues across corporate departments, contributing to a reported 5% reduction in system downtime.
- Supported operating-system updates, system maintenance, and security compliance protocols within a regulated banking environment while logging issues and conducting end-user stability testing.

Early Code — *Mobile App Intern* **Onsite | Mar 2025 – Jun 2025**

- Built secure authentication, user onboarding modules, and home-feed logic end-to-end for a university community mobile application using React Native and Expo.
- Integrated client-side mobile features with backend REST services and authentication flows, collaborating with product and design teams to improve application reliability and user experience.

NetAlert Inc. — *Frontend Intern* **Hybrid | Aug 2024 – Dec 2024**

- Developed reusable React components and Redux state management modules for a fintech dashboard consuming backend REST microservices.
- Collaborated with UX designers via Figma to translate product requirements into functional user interfaces and a waitlist landing page.

ALX / HeadStarter — *Software Engineering Fellow*

Remote | Apr 2024 – Aug 2024

- Shipped end-to-end web features using React and Next.js across Agile sprint cycles while participating in peer code reviews and architectural discussions.

PROJECTS

TrybeMarket | *React Native · Expo · Firebase · Node.js · Jest*

- Engineered secure authentication, marketplace item listings, and payment flows for a mobile-first hyperlocal e-commerce platform targeting Nigerian university students.
- Collaborated in a 3-person team, writing modular backend/frontend code with 70%+ Jest test coverage and successfully delivering a production-ready beta version.

Voxza | *Next.js · React · Groq AI · Supabase · FastAPI · React Native · GCP*

- Architected an AI-powered video journaling platform connecting Next.js and React Native clients with FastAPI and GCP microservices.
- Built an asynchronous AI backend processing pipeline supporting video transcription, automated summarisation, sentiment/mood analysis, and actionable task extraction.

EDUCATION & RELEVANT COURSEWORK

Lead City University — Ibadan, Nigeria
Bachelor of Science (B.Sc.) in Software Engineering — *First Class Honours* (Jan 2023 – Jul 2026)

- **Relevant Coursework:** Software Architecture & Design, Software Requirements & Design, Software Testing & Quality Assurance, Database Management, Distributed & Cloud Computing, Software Engineering Security, Software Configuration Management & Maintenance, Software Engineering Process.

CERTIFICATIONS

- **ISC2 Certified in Cybersecurity (CC)** — Active Credential
- **Cisco Certified Support Technician (CCST) IT Support** — Completed
